PROFESSIONAL SUMMARY

Full-stack developer and database specialist with hands-on experience in Oracle DBA, game development (Unity3D), and MERN applications. BS IT student at Bahria University Karachi (graduating 2026) with expertise in cloud deployment, machine learning, and AI-integrated systems. Proficient in Claude Code for accelerated development workflows.

EDUCATION

BS Information Technology — Bahria University Karachi 2022 – 2026
Intermediate (Pre-Engineering) — Gulshan-e-Iqbal College, Karachi 2020 – 2022

EXPERIENCE

Database Administrator Intern Sep 2024 – Nov 2024
Mag Tech Consultants

- Provisioned and configured Oracle Database on Oracle Linux with instance creation, tablespace setup, and user management
- Implemented RMAN backup strategies (full, incremental, archivelog) with scheduled restore and recovery testing
- Automated database backups via Python script, eliminating manual processes
- Configured dual-node Oracle environment for high availability and failover readiness

Freelance Game Developer 2023 – Present
Unity3D & C#

- Designed and delivered 4 commercial 3D games with custom UI, NPC AI, player controls, and audio integration
- Reduced development time by 30% through modular, reusable component architecture
- Automated character animation workflows, saving 10+ hours per week

PROJECTS

Smart Travel Planner — AI-Based Trip Planning System HTML, CSS, JavaScript, AI APIs
github.com/Huzaifa12126/Smart-Travel-Planner-An-AI-Based-Intelligent-Trip-Planning-System

- Built an intelligent trip planning web app integrating AI APIs to generate personalized itineraries.
- Implemented destination search, budget estimation, and day-by-day schedule generation.

Diabetes Readmission Classifier Python, scikit-learn, pandas, Jupyter Notebook
github.com/Huzaifa12126/Diabetes-Readmission-Classifer

- Trained a machine learning classifier on 100,000+ hospital records to predict patient readmission risk.
- Applied feature engineering, data cleaning, and model evaluation achieving strong classification performance.

Android Inventory Management System Kotlin, Android Studio, SQLite
github.com/Huzaifa12126/Android-based-Inventory-Management-System

- Developed a full-featured Android app for real-time inventory tracking with CRUD operations.
- Integrated local SQLite database with a clean Material Design UI for warehouse use cases.

Rental Product Platform — Full-Stack Web App MongoDB, Express, React, Node.js, Cloudinary, Nodemailer

- Built end-to-end rental platform with product listings, filters, user authentication, and admin dashboard.
- Integrated Cloudinary for image uploads and Nodemailer for transactional email; validated with 100+ test entries.

Voting Management System Java (Swing)
github.com/Huzaifa12126/Voting-Management-System

- Desktop app with admin login, voter registration, and live results; reduced invalid entries by 90% via form validation.

Hospital Management System C++
• Console-based system managing 150+ patient records using linked lists and file I/O for scheduling and billing.

CERTIFICATIONS

Claude Code 101 (Anthropic Skilljar) — Project Management Short Course (OHSC) — Generative AI and MLOps (Self-Directed)

TECHNICAL SKILLS

Languages: Python, JavaScript, Java, C++, C#, Kotlin — **Web:** React, Node.js, Express, MongoDB, MERN Stack — **Database:** Oracle, MySQL, SQLite, MongoDB, Oracle Linux — **Mobile & Games:** Android (Kotlin), Unity3D, Unreal Engine — **ML:** scikit-learn, TensorFlow, NumPy, pandas — **Tools:** Git, GitHub, Postman, VS Code, Claude Code
